(54) Title: MICROORGANISM REDUCTION METHODS AND COMPOSITIONS FOR FOOD ✓

## (57) Abstract

Basic cleaning compositions using toxicologically-acceptable ingredients for treating food such as produce, e.g., fruits and vegetables, and edible animal proteins are provided. Liquid formulations comprising, optionally, less than about 0.5% detergent surfactant, such as potassium alkyl sulfate, that does not affect palatability and basic buffer to provide a pH of at least 10.5 are applied to food products immediately before consumption and allowed to stay for at least about one half minute to significantly reduce microorganism contamination. The food can be consumed without rinsing.

**INTERNATIONAL PRELIMINARY  
EXAMINATION REPORT - SEPARATE SHEET**

International application No. PCT/US98/13280

**Re item V**

**1 Citations**

Reference is made to the following document:

D1: WO 97/15202 A

**2 Novelty (Article 33(2) PCT)**

Document D1 describes cleaning sanitizing methods and compositions suitable for fruits and vegetables.

The compositions have a pH of more than 9.5, preferably in the range of from 11.5 to 12.5 and comprise a basic carbonate buffer and optionally up to 0.2% anionic surfactant (see claims 1-4). The composition is safe even when the produce is not completely rinsed (see page 5, lines 23-29) and the treatment is carried out for at least about one minute (see page 14, lines 31 - page 15, line 5).

Thus, D1 already discloses all the features of claim 1.

The subject-matter of claims 2,3,8,9,12,15 (see the viscosity requirements page 10, lines 1-4), 18-21 is also known from D1.

It is pointed out that the expression of claim 21 "impure water" is not clear and well defined. It is hence considered that the water used in D1 is at least to some extent "impure".

**3 Inventive step (Article 33(3) PCT)**

The problem underlying the present invention can be seen in the provision of a method and composition for reducing the level of microorganisms on food products, wherein said food does not need to be rinsed before consumption and water which is not safe for use can be used for dilution.

It is not readily apparent, in view of the high number of optional or possible alternative components of the treatment solution (especially as disclosed in claims 2-6 and 8-14) how such result is achieved.

**INTERNATIONAL PRELIMINARY  
EXAMINATION REPORT - SEPARATE SHEET**

---

International application No. PCT/US98/13280

The subject-matter of claims 4-7,10,11,13,14,16,17 is however not disclosed or suggested in the available prior art and could therefore support the inventive step of a new independent claim.

**Re item VII**

Contrary to the requirements of Rule 5.1(a)(ii) PCT, the relevant background art disclosed in the document D1 is not mentioned in the description, nor is this document identified therein.

**Re item VIII**

Claim 1 does not meet the requirements of Article 6 PCT in that the matter for which protection is sought is not clearly defined. The claim attempts to define the subject-matter in terms of the result to be achieved which merely amounts to a statement of the underlying problem: "the composition being essentially free of any material that adversely affects safety or palatability, so that said food does not need to be rinsed before consumption". The technical features necessary for achieving this result are not disclosed. It should be noted that any independent claim must contain all the technical features essential to the invention (Article 6 PCT taken in combination with Rule 6(3)(b) PCT).
